HTML / CSS / JavaScript / JAVA / PHP / Android / Microsoft Office

PROJECTS

Tsuup Application

2024

Graduation project

The Tsuup application is developed to provide users with a comprehensive solution for accessing Egusi recipes and ordering ingredients. This application targets individuals interested in preparing Egusi dishes and those seeking a convenient way to obtain the necessary ingredients. The scope of this research covers

the design and implementation of the Tsuup mobile application, with functionalities restricted to the following:

- i. **Recipe Information:** Providing detailed ingredients for preparing Egusi Soup.
- ii. **Preparation Steps:** Providing step-by-step preparation guides for the Egusi recipe.
- iii. **Ordering System:** Enabling users to order Egusi recipe directly through the application, it redirects you to a website where users can order from.

Smart Fan control

11/2023

University
3rd year
project

It is a web-based control system for a smart fan using HTML, CSS, and JavaScript.

- Implemented manual and voice control functionalities for turning the fan on/off and adjusting speed.

Online E-Ticket System

July/2021

University
1st Year
project

The Online E-Ticket System is a comprehensive web-based platform designed to book flight tickets. This innovative system aims to provide travelers with a convenient and efficient way to manage their travel arrangements, from selecting flights to making secure online payments. Targeting both individual travelers and travel agencies, the system integrates advanced technology to enhance user experience and operational efficiency.
